Exam : **JN0-1300**

Title : Juniper Networks Certified
Design Specialist, Data
Center

Version : DEMO

1.What are two valid types of software-defined networking architectures? (Choose two.)

- A. hardware-based
- B. controller-based
- C. policy-based
- D. actuation-based

Answer: B, C

2.Your customer wants to implement better quality of service for multiple mission critical applications. How many bits of the Differentiated Services (DiffServ) field of a packet would be used as code-points to achieve this goal?

- A. eight
- B. two
- C. six
- D. ten

Answer: C

3.The Junos Fusion architecture is comprised of which two components? (Choose two.)

- A. interconnect devices
- B. satellite devices
- C. node devices
- D. aggregation devices

Answer: B, D

Explanation:

The Junos Fusion architecture consists of two major components: “Aggregation” devices and “Satellite” devices, which Juniper also calls Linux Forwarding Engines (LFEs). These components work together as a single switching system,flattening the network to a single tier without compromising resiliency.
