**Exam** : **PCCET**

**Title** : Palo Alto Networks Certified  
Cybersecurity Entry-level  
Technician

**Version** : DEMO

1.What are three benefits of SD-WAN infrastructure? (Choose three.)

- A. Improving performance of SaaS applications by requiring all traffic to be back-hauled through the corporate headquarters network
- B. Promoting simplicity through the utilization of a centralized management structure
- C. Utilizing zero-touch provisioning for automated deployments
- D. Leveraging remote site routing technical support by relying on MPLS
- E. Improving performance by allowing efficient access to cloud-based resources without requiring back-haul traffic to a centralized location

**Answer:** B,C,E

**Explanation:**

Simplicity: Because each device is centrally managed, with routing based on application policies, WAN managers can create and update security rules in real time as network requirements change. Also, when SD-WAN is combined with zero-touch provisioning, a feature that helps automate the deployment and configuration processes, organizations can further reduce the complexity, resources, and operating expenses required to spin up new sites. Improved performance: By allowing efficient access to cloud-based resources without the need to backhaul traffic to centralized locations, organizations can provide a better user experience.

2.In SecOps, what are two of the components included in the identify stage? (Choose two.)

- A. Initial Research
- B. Change Control
- C. Content Engineering
- D. Breach Response

**Answer:** A,C

3.Data Loss Prevention (DLP) and Cloud Access Security Broker (CASB) fall under which Prisma access service layer?

- A. Network
- B. Management
- C. Cloud
- D. Security

**Answer:** D

**Explanation:**

A SASE solution converges networking and security services into one unified, cloud-delivered solution (see Figure 3-12) that includes the following:

Networking

Software-defined wide-area networks (SD-WANs)

Virtual private networks (VPNs)

Zero Trust network access (ZTNA)

Quality of Service (QoS)

Security

Firewall as a service (FWaaS)

Domain Name System (DNS) security

Threat prevention

Secure web gateway (SWG)  
Data loss prevention (DLP)  
Cloud access security broker (CASB)

4. On an endpoint, which method is used to protect proprietary data stored on a laptop that has been stolen?

- A. operating system patches
- B. full-disk encryption
- C. periodic data backups
- D. endpoint-based firewall

**Answer: B**

5. Which technique uses file sharing or an instant messenger client such as Meebo running over Hypertext Transfer Protocol (HTTP)?

- A. Use of non-standard ports
- B. Hiding within SSL encryption
- C. Port hopping
- D. Tunneling within commonly used services

**Answer: D**
